

## FiberCable2/FiberTrace2

Version ID: 8.58

Release date: 15 December 2020

### Version details

OTDR event detection      V20.08

Note: licensed software program. Upgrade included over a period of 3 years (renewal 3-year period available). For installation without any valid license, a 30-day trial period provides access to all functionalities, then defaults to viewer mode. To verify the license validity, click on the information icon (top right), and select “License management”.

## General

### New functionalities

## OTDR

### Improvements

- Automatic event detection improvements

### Problem corrections

- Correct “memory error” when trying to read corrupted SOR files
- Correct of events positioned without any associated results
- Correction of A&B cursors position display. Could be reported at “around -99999000km”

## Cable Report

### Problem corrections

- Correction crash if user tries to setup page for batch report printout or pdf generation via Settings/Page
- Correction crash when user deletes almost all events on AB trace, then tries and do the same operation on the return trace.
- Correction of text report error: 2 extra lines in the “additional information” bloc of data, generating incorrect table of results
- Correction of total loss for the return trace in loopback test mode when no event presence
- Correction of a freeze when trying to change the trace color when in report generation
- Correction of out of range slope values not reported in the summary

## Connector Inspection

### Enhancements

- Better management of FiberCheck Probe results
