

# FIBERCABLE 2 SUITE

## FIBERTRACE 2 – FIBERCABLE 2

### RELEASE NOTE

#### V 8.48

#### JUNE 2019

**Note**

This version needs a license version that is free of charge in case of upgrade of recent FiberTrace/Cable versions.

Without license, the software will work in its full FiberCable version for a 30-day trial period. After this trial period, the software will continue to operate, but in FiberTrace Viewer mode.

---

## FiberTrace 2 / FiberCable 2

---

### *New functionalities*

- OSA: addition of summary page for results
- OTDR: addition of bend alarm thresholds setting

### *Improvements*

- Generic: Improved sorting of file tab
- All functions: management of the SN of the unit, which can be a string and not only a number
- OTDR: Improved handling of user defined event type
- OTDR: Improved tolerance of the launch cable distance setting
- OSA: Improved handling of power level alarms

---

## FiberCable 2 Only

---

### *New functionalities*

- Measurement report: ability to generate a report using .CSOR files, as well as other read-only OTDR files
- New management of the fiber status on the measurement report, this with three states: Pass, Fail or Error. In case of fail or error, then associated information is provided on the “details” column
- Ability to ignore the missing slopes as failed events when generating reports (useful on very short links)

### *Improvements*

- Preview: Improved refresh of the preview mode when changing parameters
- Preview: Improved management of the access of the trace, when the user is clicking from the bend area
- Preview: dedicated global line status column now available
- Excel Macro: improved handling of Excel 2010
